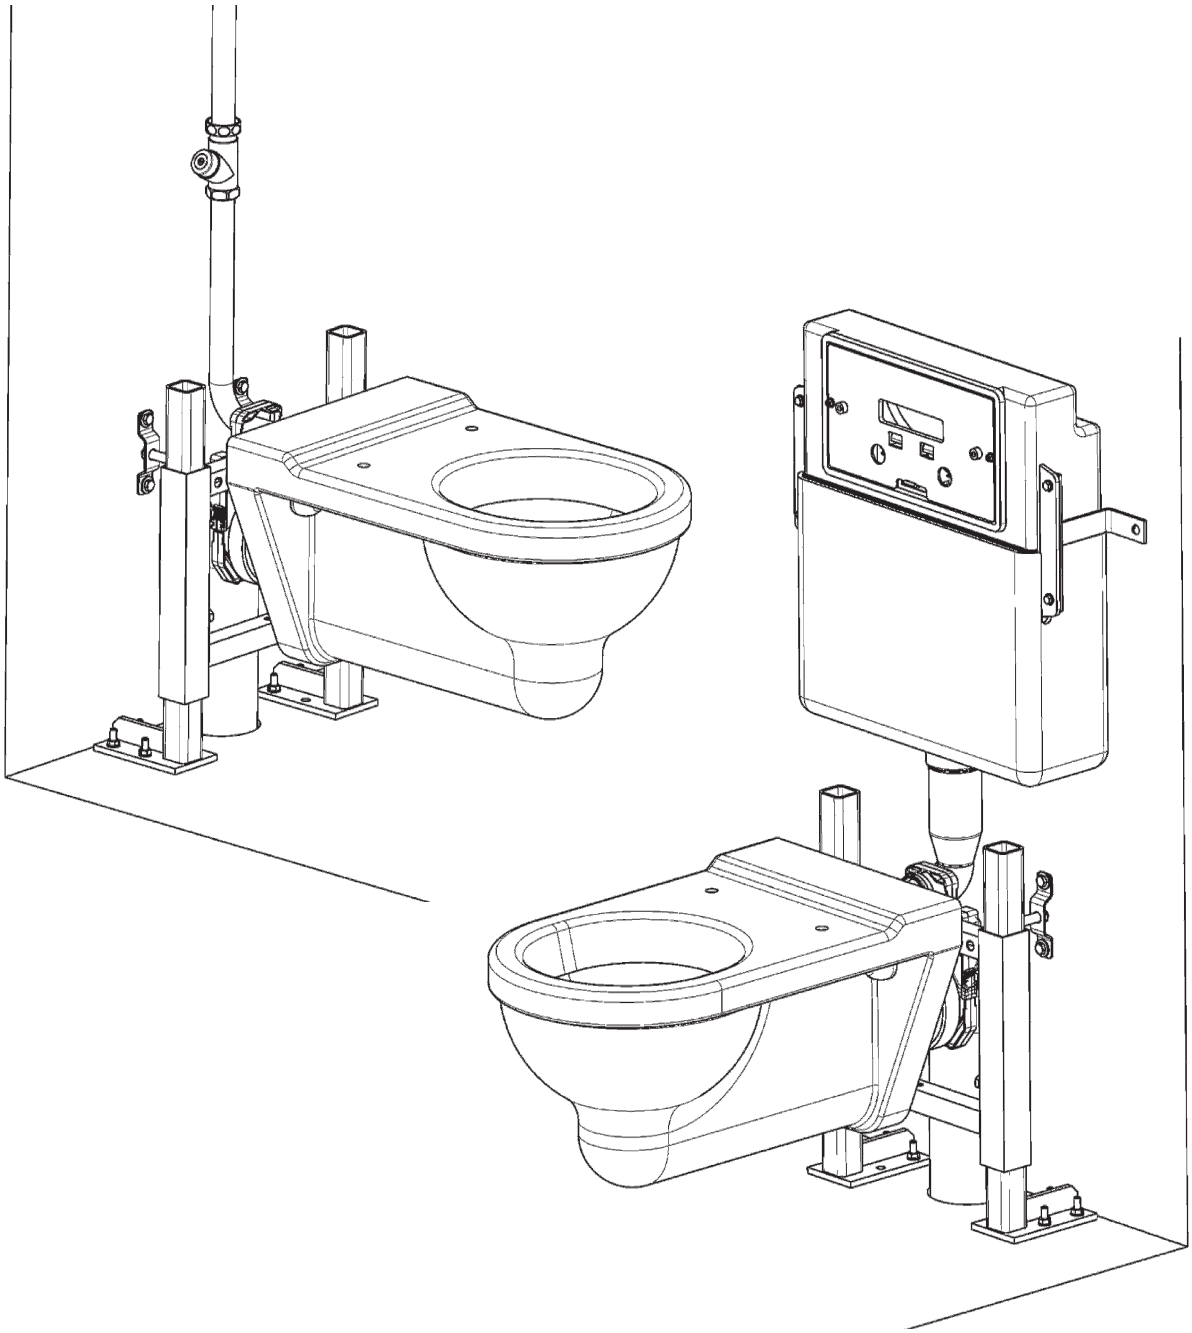
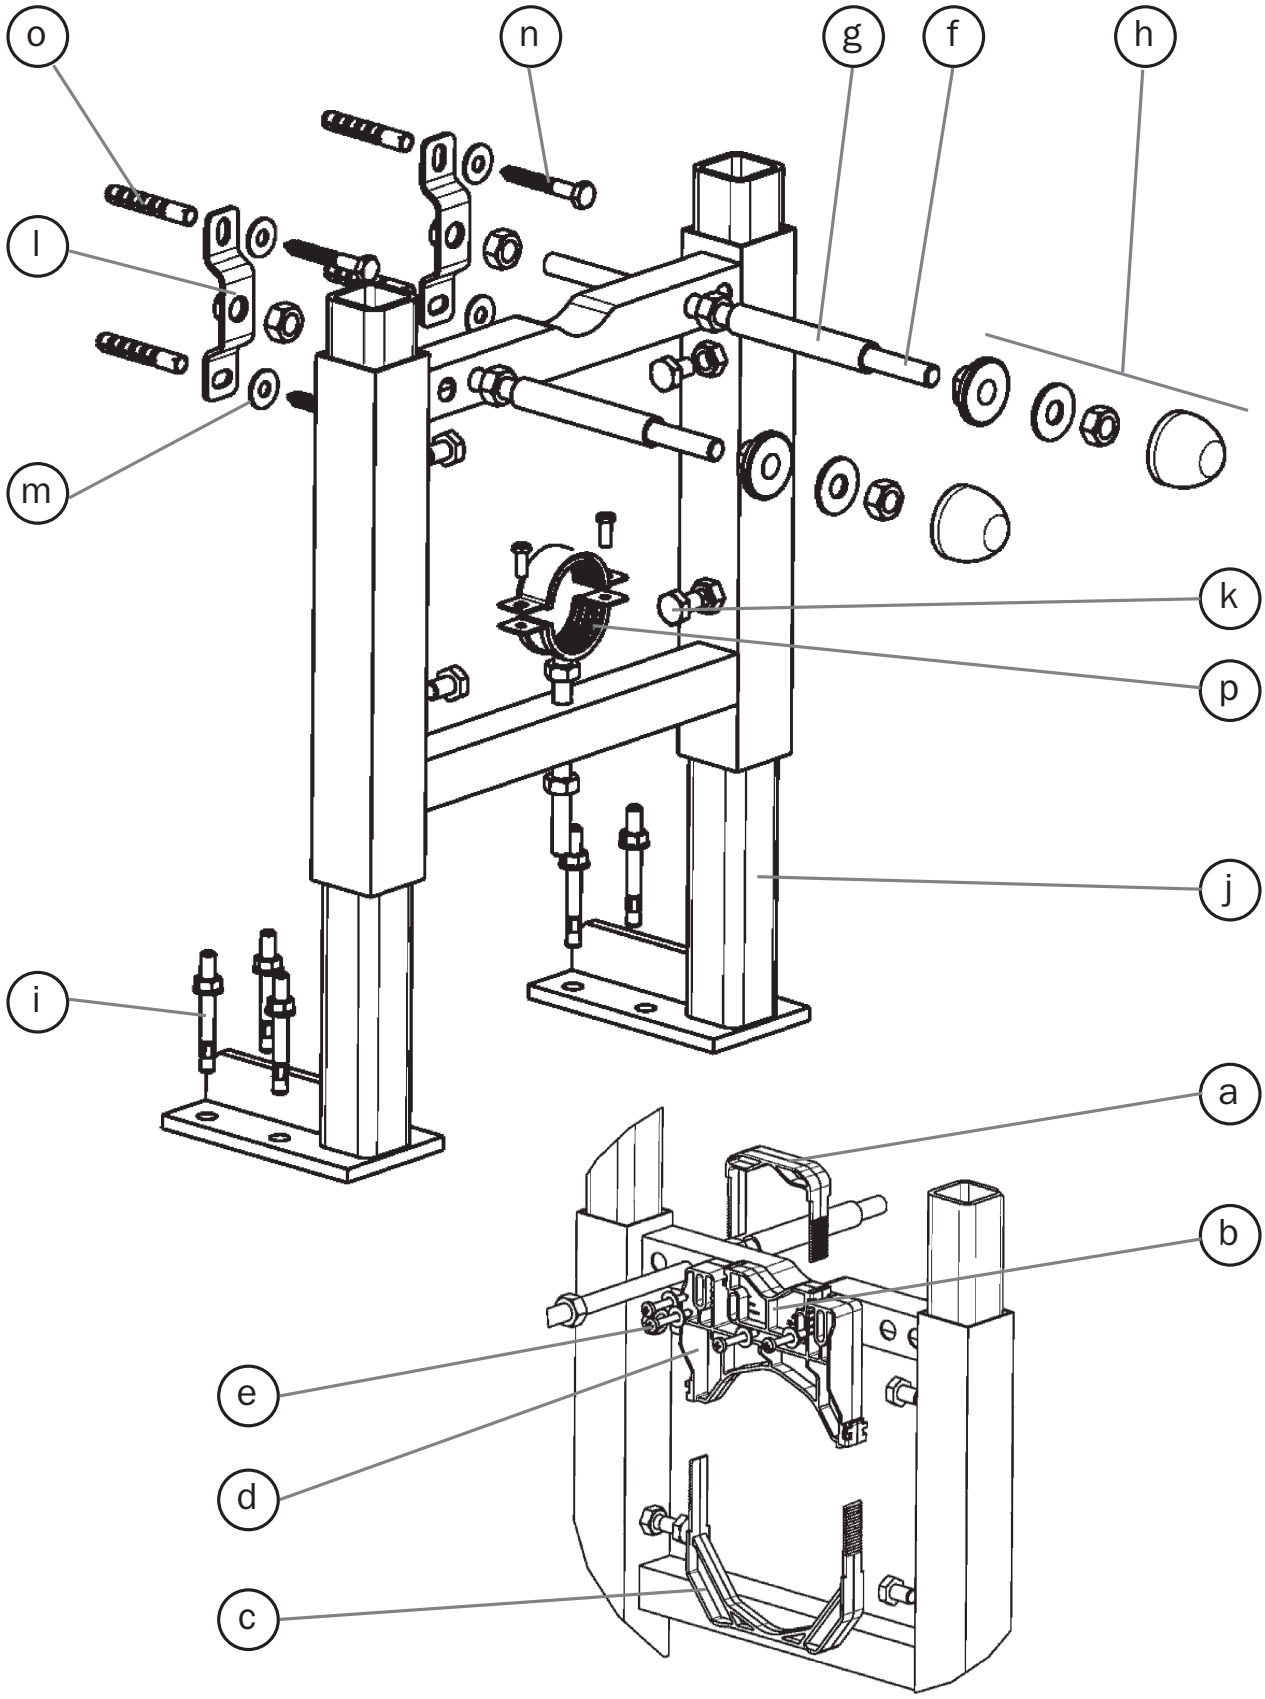
Important – Please Read

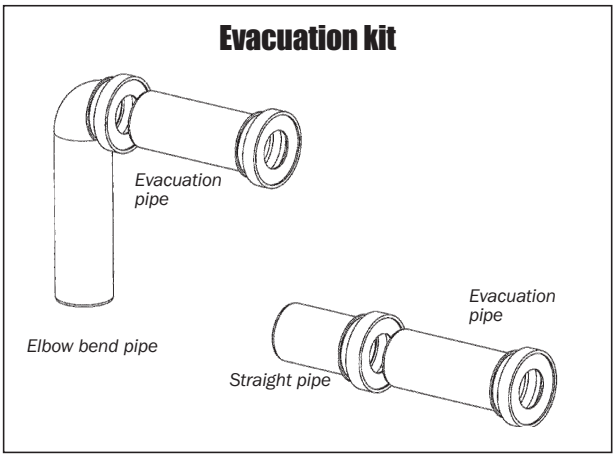


DESCRIPTION



ⓐ Elbow bend fixation clip
ⓑ Elbow bend fixation
ⓒ Pipe fixation clip
ⓓ Pipe fixation
ⓔ Fixation screw and washer (x4)
ⓕ Bowl fixing strip (x2), length 400mm
ⓖ Flexible sleeve (x 2)
ⓗ Bowl fixing kit
ⓘ Metal pegs (x6)
ⓙ Adjustable legs (x2)
ⓚ Punch screw
ⓛ Wall brackets (x2)
ⓜ Washer (x4)
ⓝ Wall screw (x4)
ⓞ Wall plugs (x4)
ⓟ Collar bidet (x1)

ACCESSORIES (not supplied)



Evacuation kit elbow bend	Ref. 92 4000-07
Evacuation kit straight	Ref. 92 4010-07

Tools required:

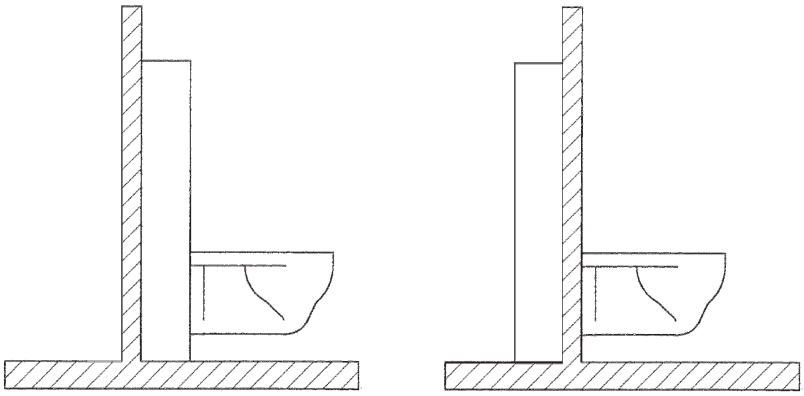
- Set of keys from 8 to 19mm
- Metal saw
- Drill with a bit diameter 8mm
- Leveller
- Pencil & ruler
- Measuring tape
- Hammer
- Screwdriver

Advice:

- Keep this notice for any future maintenance

⚠ Read the instructions supplied with the bowl, the cover, the tank and the pressurised water supply system before starting installation work.

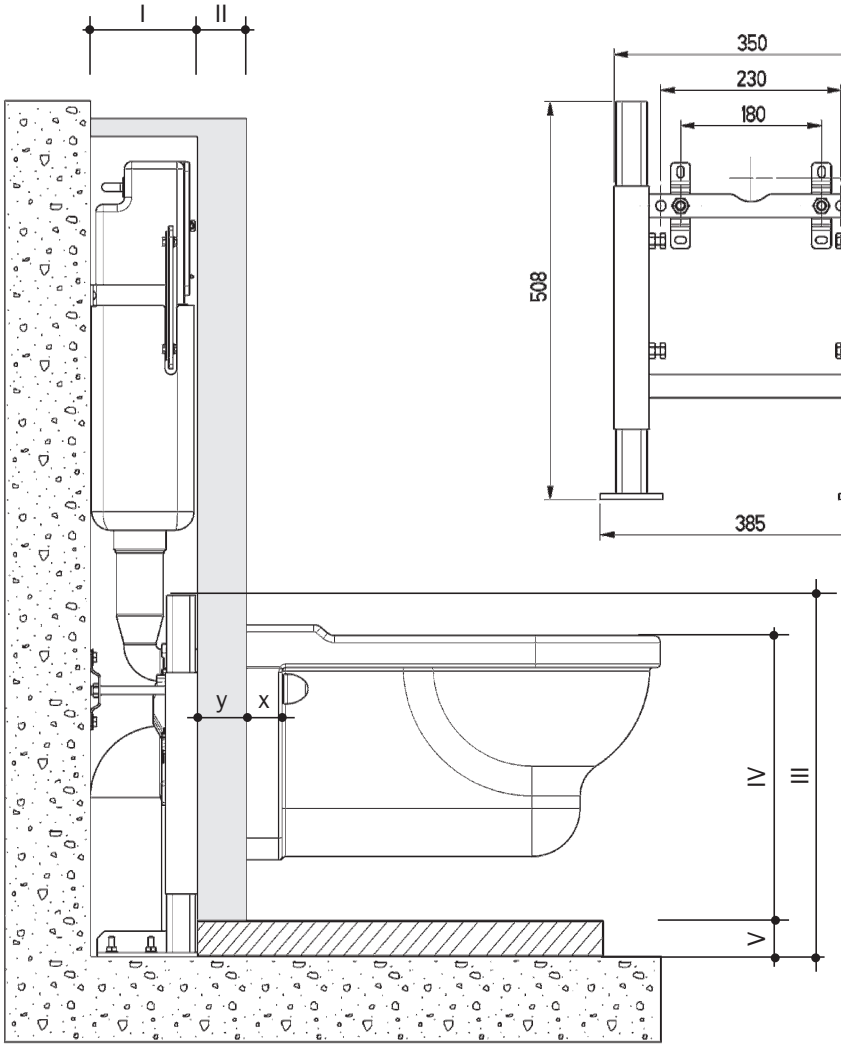
TYPES OF INSTALLATION



❶ Fixed to a thin partition wall

❷ Built in to the rising column

USEFUL MEASUREMENTS



I - Minimum depth of the frame = 140mm

II - Thickness of the cladding
Y – 400 – 80- x mm
Or, x = thickness of the ceramics at the bowl fixation level
This calculation does not take into account any constraints due to the tank or pressurised water supply.

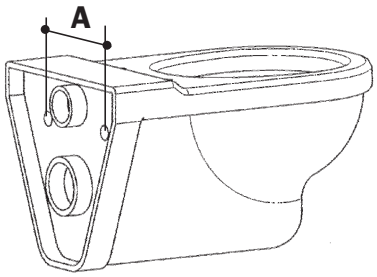
III - Height : adjustable from 325 to 525mm

IV - Height of the bowl : 400mm (finished floor)

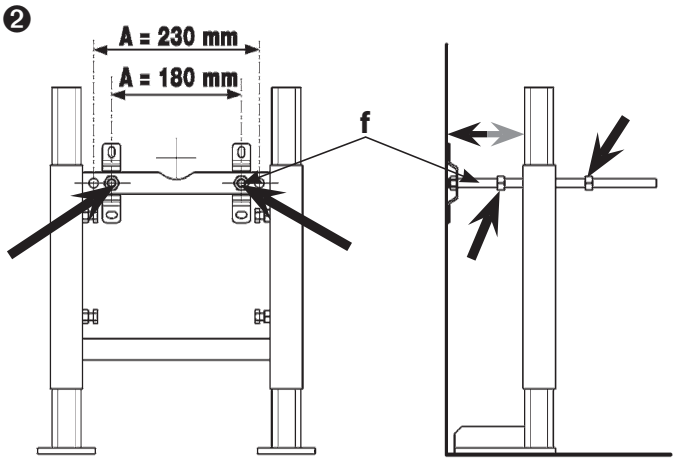
V - maximum thickness of the finished floor = 185mm

I - ASSEMBLING THE BOWL FIXATION RODS

❶



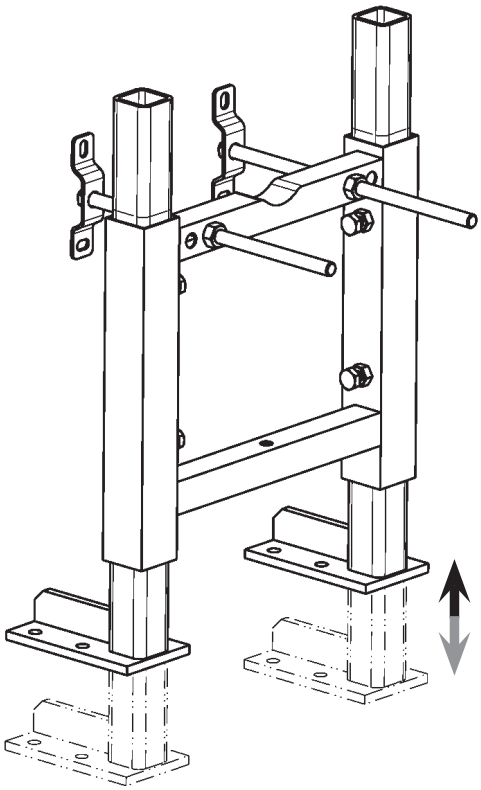
❷

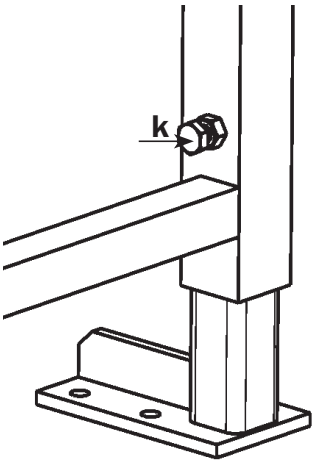


❶ Measure the between-axis of the bowl (A)

❷ Place the rods (f) in the holes in the frame corresponding to the between-axis and fix them in place with 2 nuts.

II - ADJUSTING THE FRAME HEIGHT





❶ Place the frame in its final position

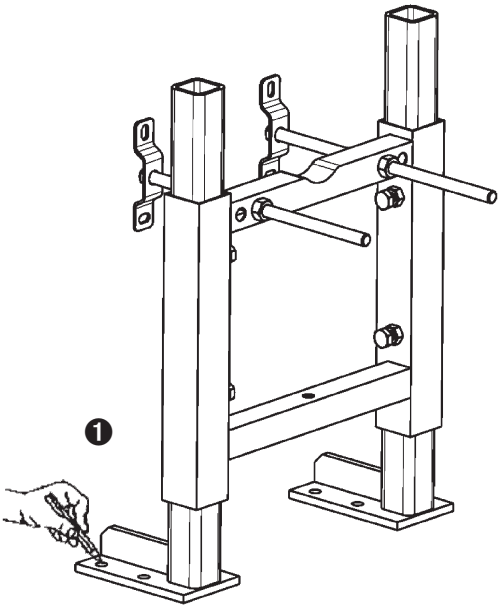
❷ Unscrew the 4 nuts (k)

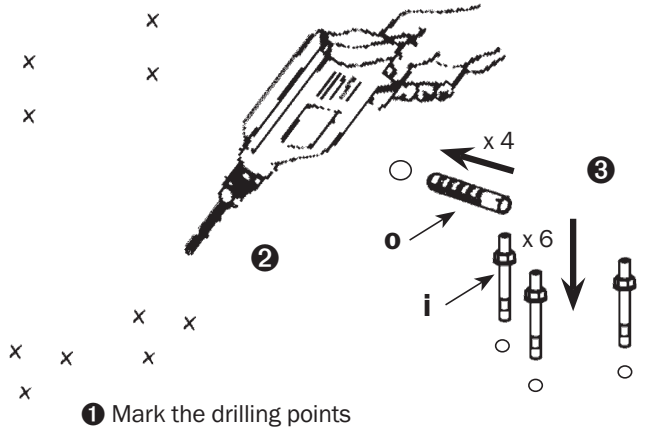
❸ Adjust the leg heights so that the top of the bowl is at about 400 mm from the finished floor

❹ Check that the frame is horizontally level, and screw the nuts back in.

⚠ If the frame is fixed onto a bare floor, the maximum thickness of the finished floor should not exceed 185 cm.

III - PREPARING THE FIXATION





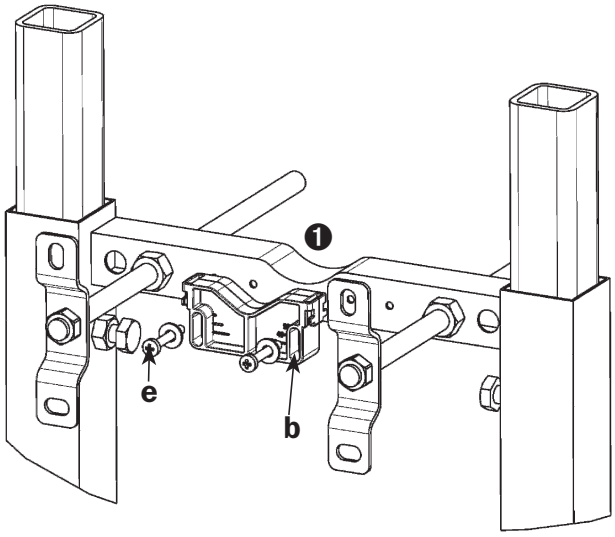
❶ Mark the drilling points

❷ Remove the frame and drill to a depth of 55 mm at maximum, using an 8 mm diameter drill bit for ground metal plugs. For wall plugs use a 10 mm diameter drill bit, and drill to a depth of 70 mm

❸ Move the frame back in place, position the metal pegs (i) in the holes without any effort

BOWL installation beginning page 6
BIDET installation beginning page 12

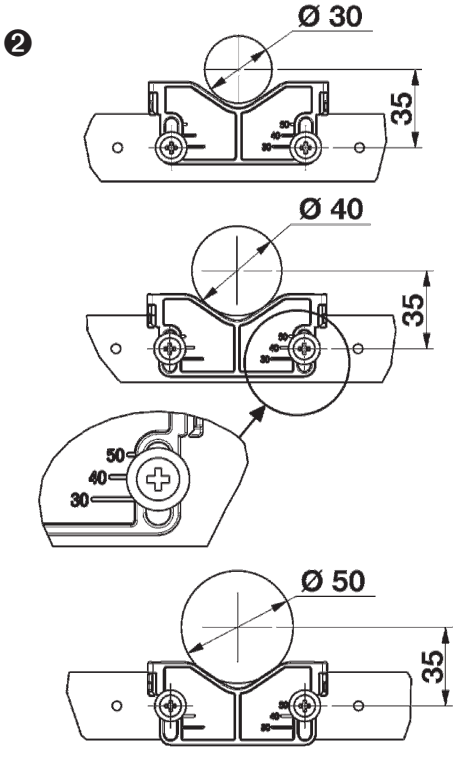
IV - PREPARING THE BOWL WATER SUPPLY



❶ Measure the diameter of the feeder pipe at the place where it will be attached to the fixation clip.

❷ Put the fixation clip into place (b) using 2 screws and washers (e) and adjust the height according to the measured diameter. Marks are engraved on the clip to guide you.

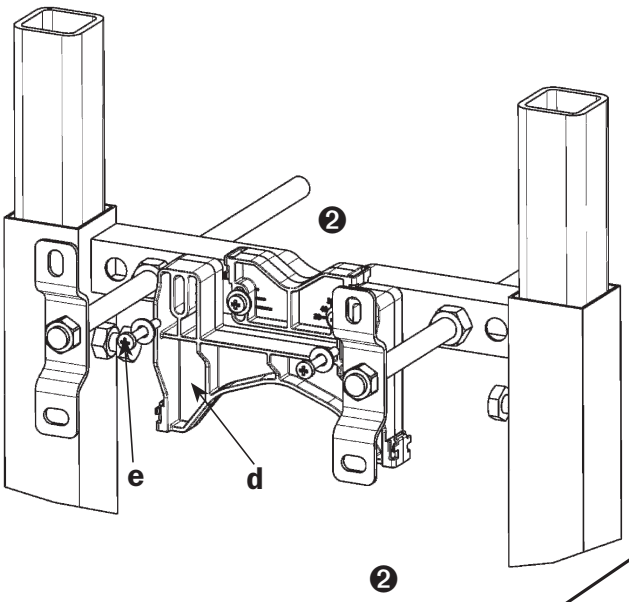
❷

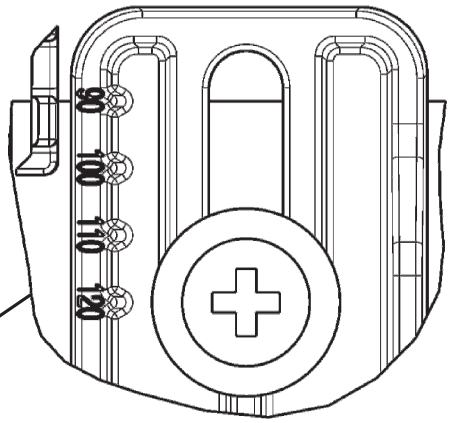


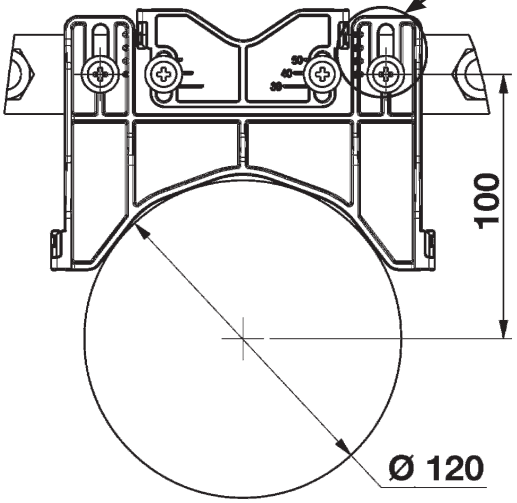
V - PREPARING THE BOWL EVACUATION CONNECTION

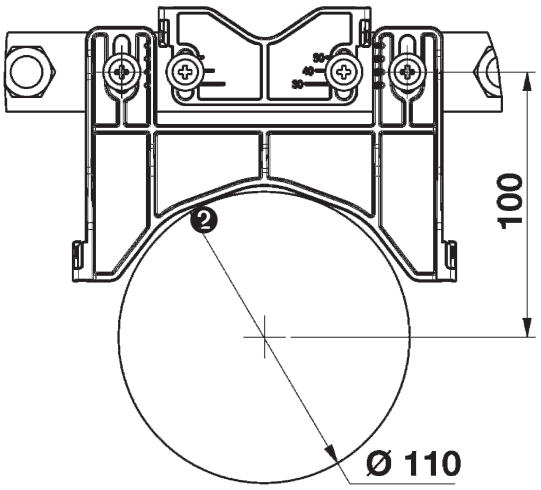
❶ Measure the diameter of the evacuation pipe at the place where it will be attached to the fixation clip.

❷ Attach the fixation clip using 2 screws and washers (e) and adjust the height according to the measured diameter. Marks are engraved on the clip to guide you.

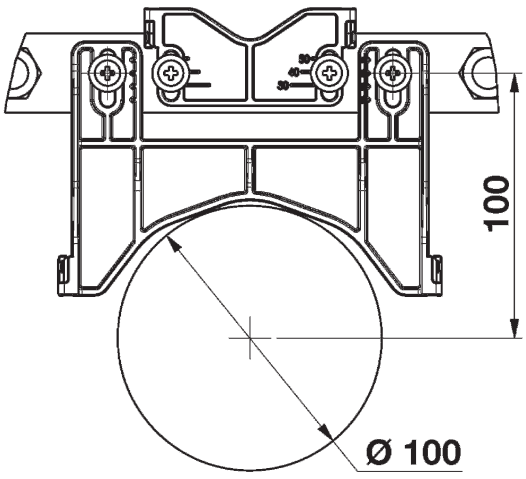


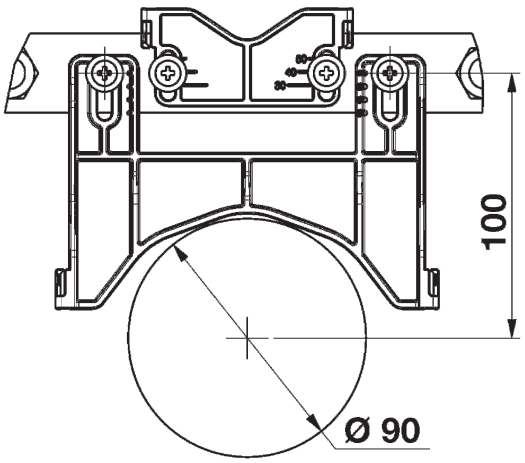






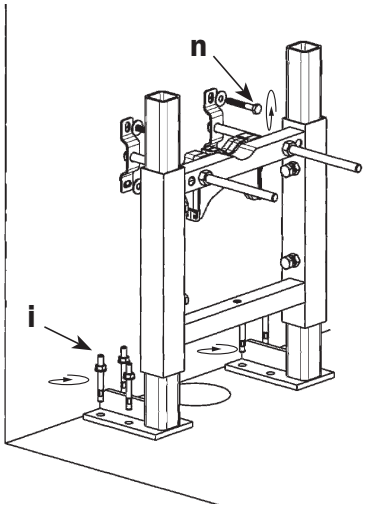
❷



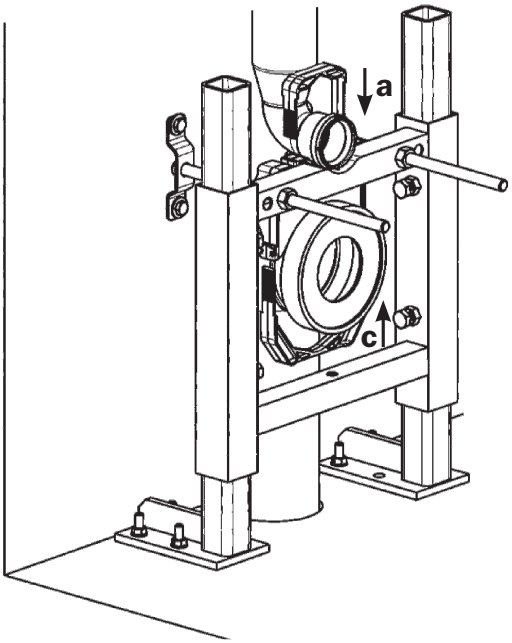


VI - PUTTING THE FRAME INTO PLACE

❶ Put the frame into its final place and attach it with the metal pegs, they must be inserted into the holes without any effort.



VII - CONNECTING THE WATER SUPPLY AND BOWL EVACUATION



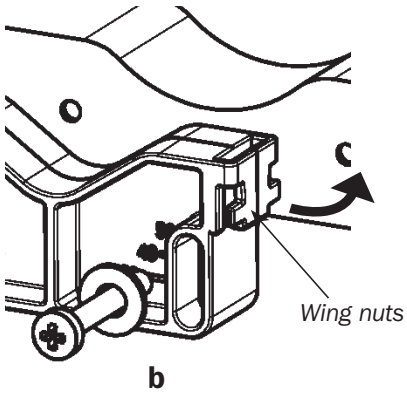
❶ Put the evacuation pipe into place

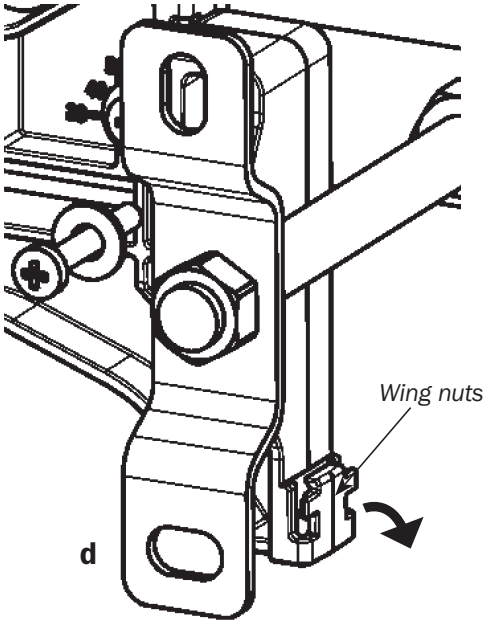
❷ Attach the pipe using the fixation clip (c)

❸ Put the elbow bend supply pipe into place

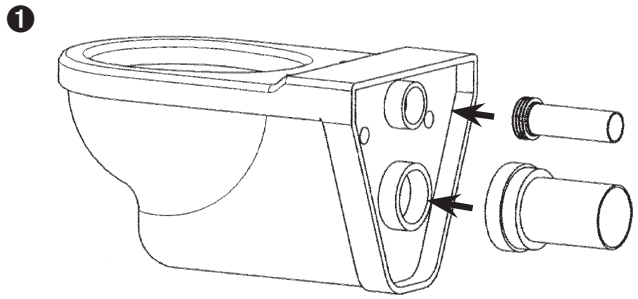
❹ Attach the elbo bend pipe using the fixation clip (a)

⚠ If you need to unclip, wing nuts are attached to the fixing clips to do this.





VIII - WATER TRIALS



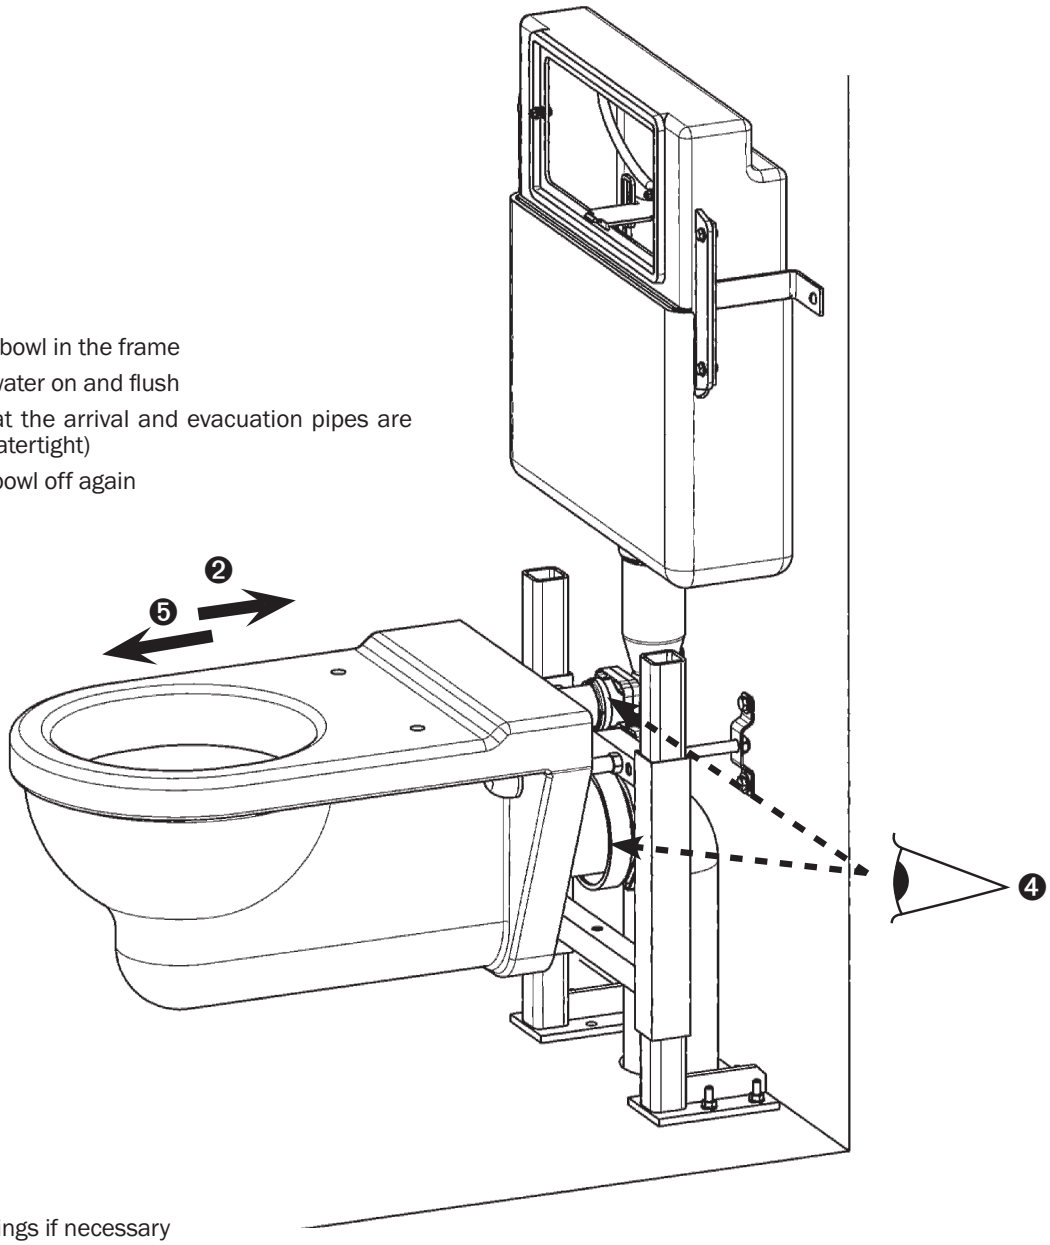
❶ Insert the water supply pipe and the evacuation pipe into the holes on the bowl.

❷ Place the bowl in the frame

❸ Turn the water on and flush

❹ Check that the arrival and evacuation pipes are sealed (watertight)

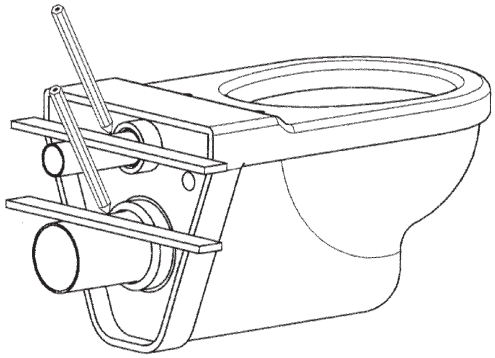
❺ Take the bowl off again



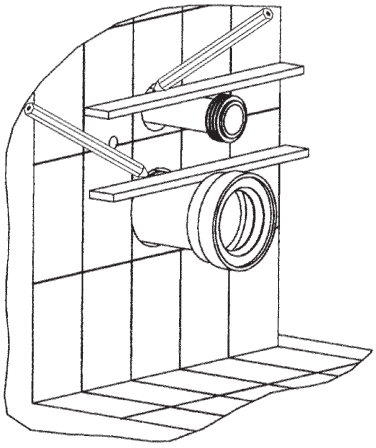
Do the finishings if necessary

X - CONNECTING THE BOWL

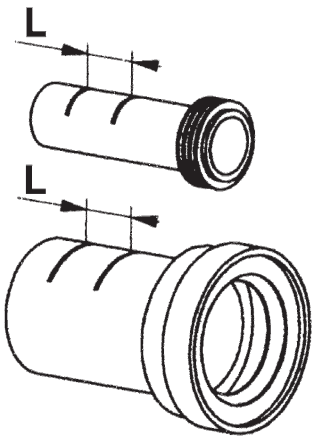
⚠ Read the instructions for the bowl and lid before starting.



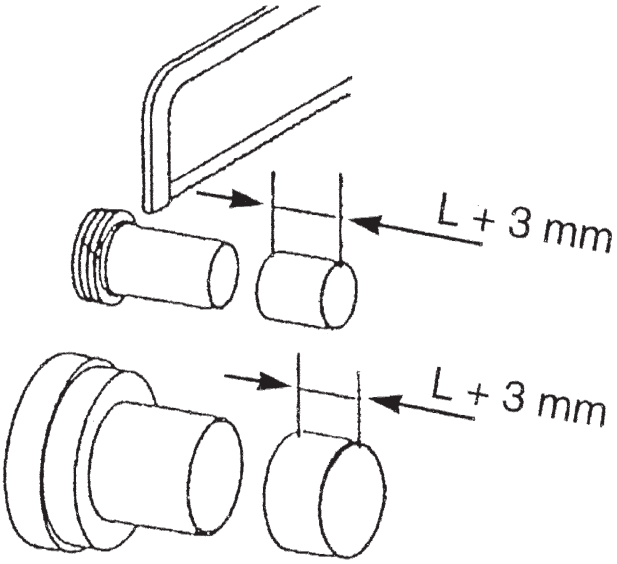
❶ Using a ruler placed as in the drawing below, make a mark on the bowl side of the 2 supply pipes.



❷ Take the pipes off the bowl and insert them into the frame. Using a ruler placed as in the drawing below, make a mark on the wall side of the 2 pipes.



❸ For each of the pipes, measure the distance (L) between the 2 marks



❹ Carry over this measurement (L) and increase it by 3mm at the end (on the frame side) of each pipe. For example, if L = 50mm, shorten the pipe by 53mm

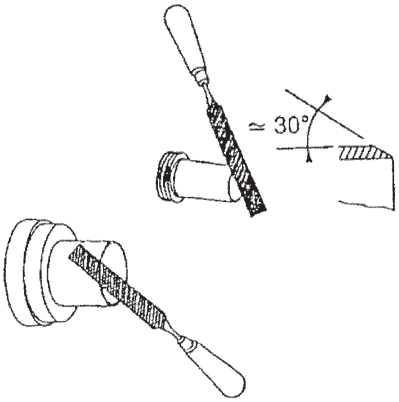
❺ Cut the pipes with a metal saw

❻ Smoothen the cuts with a file

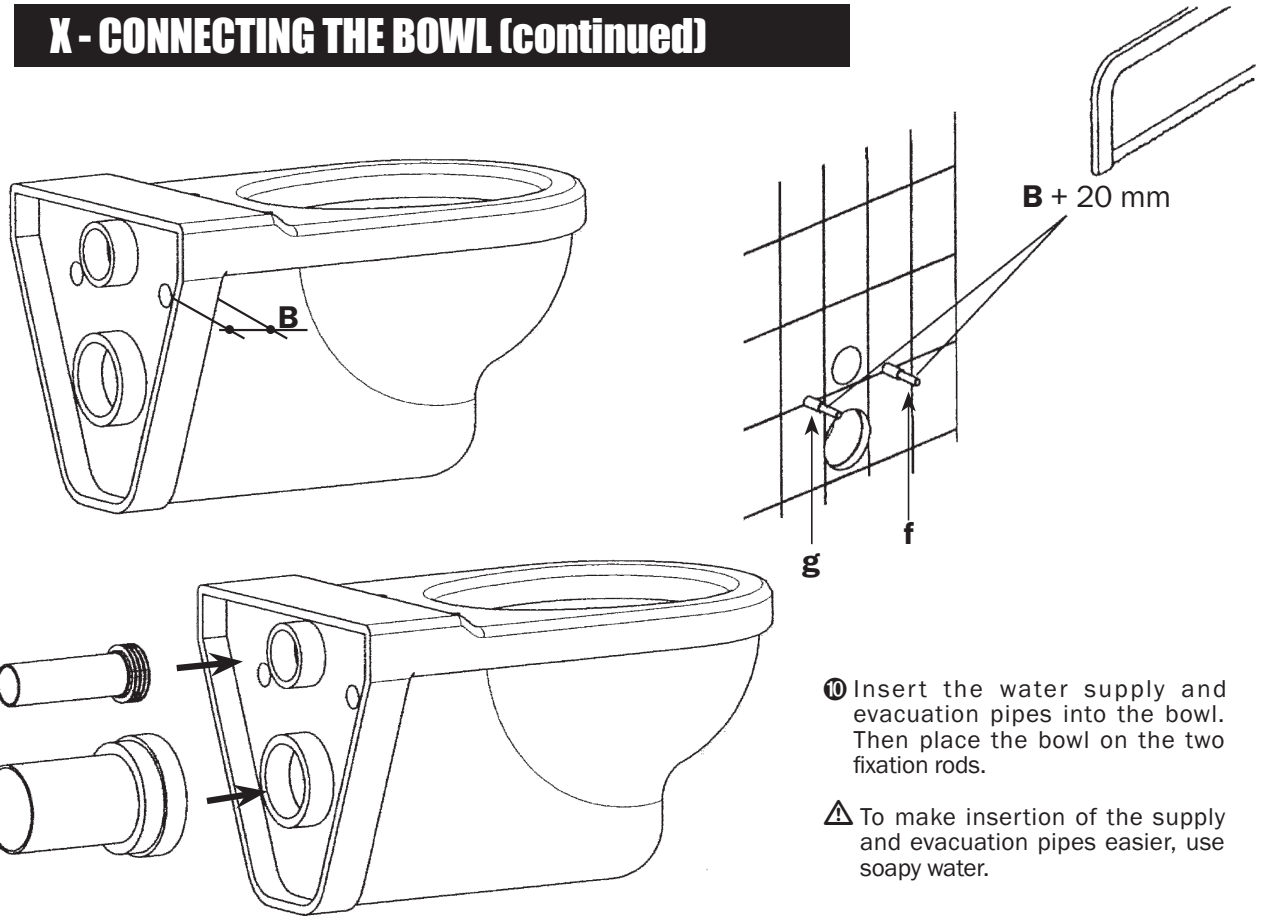
❼ Measure the thickness of the back of the bowl (B)

❽ If necessary, cut the fixation rods (I) so that the part which sticks out from the wall is equal to (B) + 20mm.

❾ Shorten the flexible sleeves so that the part which sticks out from the wall is equal to (B) – 15mm



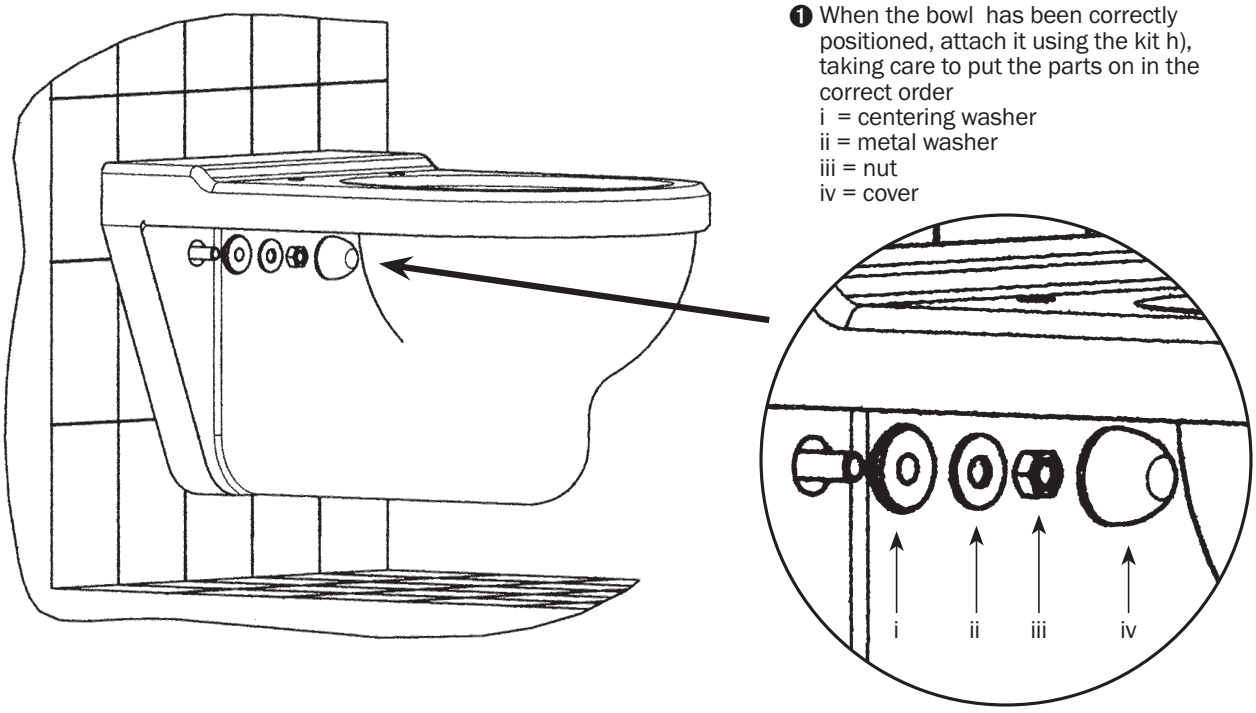
X - CONNECTING THE BOWL (continued)



❿ Insert the water supply and evacuation pipes into the bowl. Then place the bowl on the two fixation rods.

⚠ To make insertion of the supply and evacuation pipes easier, use soapy water.

XI - ATTACHING THE BOWL



❶ When the bowl has been correctly positioned, attach it using the kit h), taking care to put the parts on in the correct order
i = centering washer
ii = metal washer
iii = nut
iv = cover
